Ionisation energy

Pre-lesson assignment p.96-98

Define the following terms:

- First Ionisation Energy
- Second Ionisation energy

Make notes on ionisation energy:

Use the following questions as guidance:

- 1. Write an equation for the first ionisation energy of sodium, and give three factors that will affect the attraction between nucleus and outer electron.
- 2. Write an equation for the first and second ionisation energy of helium, and explain why the magnitude of the second is greater than the first.
- 3. What evidence is there, from successive ionisation energies, for the existence of energy levels, or electron shells?
