

K_c , K_p and temperature.

Pre-lesson assignment, Textbook page 302-304

First watch the video tutorial Position of equilibrium 3

Make notes on the effect of temperature on K_c and K_p

Use the following questions as guidance

1. State the effect on K_c and K_p of raising temperature of
 - a. An endothermic reaction
 - b. An exothermic reaction
2. Demonstrate using the table on p303 that at higher temperatures the equilibrium $2\text{SO}_{2(g)} + \text{O}_{2(g)} \rightleftharpoons 2\text{SO}_{3(g)}$ shifts to the left
3. Demonstrate using the table on p303 that at higher temperatures the equilibrium $\text{N}_{2(g)} + \text{O}_{2(g)} \rightleftharpoons 2\text{NO}_{(g)}$ shifts to the right.

Now complete summary questions on pages 159, 161, 297, 301, 306.
